CS 480

Version Control Document

I used GitHub for my version control system. It is simple for beginners if you get it set up correctly the first time, luckily I had CS 351 with Professor Cavalcanti so I have GitHub Desktop installed already. I had some issues figuring out the task bar menus items, so I manually committed, pushed, or pulled from the repository on my MacBook's Terminal app.

My GitHub link for this project is <https://github.com/angelanquach/calculator/tree/develop>. Below is a screen shot of my Terminal app while I committed and pushed a version of my calculator to GitHub.

```
angelaquach — sh — 156x54
Aborting commit due to empty commit message.
Angelas-MBP:calculator root# git commit "buttons are working and operations are functional. decimal is alright. working on the parentheses."
error: pathspec 'buttons are working and operations are functional. decimal is alright. working on the parentheses.' did not match any file(s) known to git.
Angelas-MBP:calculator root# git commit -m "buttons are working and operations are functional. decimal is alright. working on the parentheses."
[develop 0357552] buttons are working and operations are functional. decimal is alright. working on the parentheses.
